AMA Solutions

Strategic advisory and AI-enabled services

Make It Make Sense

A clearer problem. A useful next move.

Business design and implementation baseline · 30 October 2026

The customer problem

Business owners have tools and information, but often need help deciding where to act.

Too much information

Documents and conversations do not automatically become a shared understanding.

Unclear priorities

The visible symptom may differ from the process that constrains progress.

Fragmented execution

Advice needs a clear owner, a test and a usable handover.

The AMA analysis method

Every engagement follows the same reasoning discipline.

Map

Outcome, process, people and starting evidence.

Poke

Contradictions, assumptions and alternative causes.

Scale

A small intervention with explicit success criteria.

Pressure-proof

Repeated tests, review, ownership and handover.

Automation is one possible intervention. Better information or a simpler process may be the right first step.

The advisory entrance

One guided conversation prepares a useful next step.

Describe	Visitor states the goal and where progress gets stuck.
Orient	AMA offers one useful observation and at most one follow-up.
Recommend	One catalog offer or consulting route, with scope and reason.
Act	Purchase when ready, book a session, or browse directly.

The commercial offer

A fixed catalog supports different customer needs without multiplying the storefront.

12 one-time services

$250–$995
Scoped research, explanations, plans and decision support.

6 monthly packages

$995–$2,500/month
Fixed production cadence and clear request limits.

2 consulting offers

$350 and $1,250
Direct access to Major with preparation and written outputs.

Three previously proposed bundle/download records remain held. No additional offers are being added.

Paid analysis and design

Clients can act on the deliverable themselves or request separate implementation.

$350 session	60 minutes on one business question, preparation and a one-page next-step note.
$1,250 workshop	90 minutes on one workflow, decision map, assumptions register and staged pilot plan.
Implementation	A separate accepted proposal defines responsibilities, milestones and support.

Implementation is not bundled into advisory prices. No new fixed-price implementation SKU is implied.

A restaurant in Mobile, Alabama

Illustrative use case. No client engagement or results are claimed.

The symptom

“We receive catering inquiries but miss opportunities.”

Is the delay in response, quoting or follow-up?

The analysis

Inspect a small set of inquiries and timestamps. Identify missing evidence and a process owner.

The next move

A bounded session or workflow design. Measure response latency and inquiry progression before expanding.

One guide, scoped workers

The customer keeps one conversation while specialized tasks happen behind the scenes.

Customer guide	Captures the need, explains uncertainty and recommends a bounded route.
Digital workers	Research evidence, draft analysis and produce the purchased artifacts.
Human accountability	Major owns advisory judgment. A named reviewer accepts client delivery.

These are the intended operating roles. The deck does not claim a deployed 144-agent workforce.

Context and memory

A shared structure preserves coherence while client access stays separate.

Shared doctrine

Approved catalog, methods and public routing examples. Versioned in Git.

Client context

Private sources, decisions, conversations and outputs. Tenant-scoped retrieval.

Reviewed learning

Minimized, permissioned examples improve playbooks and evaluations.

Operational records link inquiries, orders, jobs and deliveries. Tags organize records; authorization controls access.

Evidence behind the conclusion

Each paid analysis leaves a record another person can inspect.

Question and sources	The decision, source dates, factual claims and material contradictions.
Reasoning	Alternative explanations, assumptions and confidence rationale.
Next action	A responsible owner, a next action and a measure of usefulness.
Review	A human reviewer and a date or event that requires reassessment.

Business model and economics

Product revenue supports repeatable delivery. Advisory provides a path to deeper scoped work.

One-time purchases

Price the defined output. Track preparation, production, review and revision effort.

Monthly work

Renew against a real recurring need and paid-cycle delivery limits.

Separate implementation

Quote after analysis. Preserve client choice and a usable handover.

Demand, contribution margin, customer acquisition cost and retention remain unvalidated. No financial forecast is asserted.

Initial customer acquisition

Warm relationships and existing business problems provide the first test.

Initial buyers	Existing consultants, practitioners and business owners with documents and a decision.
Entry offers	Walk In Ready, Make It Make Sense, Customer Question Kit and AI Choice Session.
Proof of usefulness	Paid completion, acceptance, customer use, delivery effort and a repeat need.

Public previews demonstrate a useful first observation. They do not promise a complete business diagnosis.

Current implementation evidence

Progress exists. Commercial activation still needs end-to-end proof.

Area	Evidence and boundary
Remote website	Next.js main contains corporate brand, advisory and contact/Resend work.
Local commerce	Owner reports 18 offers and 14 tests at 697a62a. Not present on remote main.
Advisory prototype	Owner reports 71 mock tests and Stripe fixes at 578e4c7. Not live-verified here.
Integrations	Payment, booking, voice and paid fulfillment remain unverified for launch.

Audit date: 30 October 2026. Local test reports are distinct from independently executed provider evidence.

Release sequence

The next milestone is one verified purchase-to-delivery journey.

Reconcile	Integrate local commerce and reviewed advisory UX into the existing Next.js site.
Harden	Durable order/jobs, tenant isolation, payment verification and bounded provider use.
Prove	Complete an authorized test journey and a reviewed paid pilot.
Refine	Measure acceptance, delivery effort and recurring demand within the frozen catalog.

Investor and partner discussion

The thesis is repeatable advisory delivery with an accountable human owner.

What needs proof

Buyer willingness to pay, reliable delivery and healthy contribution after human review.

Where support helps

Backend engineering, customer introductions and disciplined delivery operations.

What is not set

Fundraise amount, valuation, instrument, budget and growth forecast.

This overview supports discussion. It does not present revenue traction, investment terms or guaranteed returns.

One-time service catalog 1

Working launch prices in USD. Readiness and availability remain separate.

Offer	Price	Source limit
Walk In Ready	$250	3 units
Make It Make Sense Kit	$495	5 units
Customer Question Kit	$395	5 units
Find the Friction	$595	15 units
Find Your Opening	$795	10 units
Idea to MVP Brief	$995	8 units

One-time service catalog 2

Working launch prices in USD. Readiness and availability remain separate.

Offer	Price	Source limit
RFP Response Starter	$895	8 units
Policy Gap Review	$795	8 units
Project Clarity Brief	$395	5 units
First Week Ready	$795	8 units
Vendor Choice Brief	$895	10 units
Voice of Customer Brief	$795	8 units

Monthly packages and consulting

Working launch prices in USD. Monthly work has fixed quotas.

Offer	Price	Billing
Explain It Monthly	$1,250	Monthly
Executive Listening Desk	$995	Monthly
Team Learning Monthly	$1,750	Monthly
Customer Education Monthly	$2,250	Monthly
Decision Desk Monthly	$2,500	Monthly
Knowledge Continuity Monthly	$1,500	Monthly
AI Choice Session	$350	One-time
Map Poke Scale Pressure-Proof Workshop	$1,250	One-time
